PROFESSIONAL SUMMARY

Computer Science graduate with experience in building full-stack applications, analytics-driven solutions, and automation workflows while applying product thinking to solve real-world problems. Skilled in translating user needs into scalable technical solutions through data analysis, software development, and experimentation. Passionate about combining technology, business understanding, and product strategy to create impactful user experiences and drive measurable outcomes.

EDUCATION

Bachelors in Computer Science, Vellore Institute of Technology
CGPA: 8.61/10

06/2022 – 06/2026

PROJECTS

AI-Powered Analytics API for A/B Testing

- Built a Python-based analytics API to perform statistical analysis and A/B testing on structured datasets.
- Automated hypothesis testing and metric evaluation supporting data-driven product and business decisions.
- Designed scalable data processing workflows for reporting insights and performance comparison.
- Enabled automated variant comparison to support evidence-based feature and process optimization.

AI Sales Assistant Agent

- Developed an AI-powered assistant to automate customer interactions and response generation workflows.
- Designed user interaction flows focused on improving engagement and operational efficiency.
- Integrated APIs and automation workflows to streamline customer support and sales processes.
- Leveraged analytics and user feedback to identify optimization opportunities and improve solution effectiveness.

Full-Stack Management Platform

- Developed end-to-end web application using modern frontend and backend technologies with REST API integration.
- Implemented authentication, role-based access control, and scalable database management workflows.
- Designed responsive user interfaces focused on usability, accessibility, and performance optimization.
- Applied software engineering best practices including version control, testing, and modular architecture design.

ACHIEVEMENTS

- **Amazon - HackON Season 5:** Finalist, for developing innovative, data-driven solutions focused on analytical thinking, workflow optimization, and business problem-solving.
- Conducted business case analysis identifying operational gaps, process inefficiencies, and growth opportunities.
- Developed AI-driven recommendations leveraging automation, analytics, and customer behavior insights to solve real-world challenges.
- Earned 100,000+ Trailhead points through hands on modules covering automation, analytics, and customer relationship management.

SKILLS

Product & Business: Product Thinking, User Research, Requirement Gathering, KPI Tracking, User Journey Analysis, A/B Testing, Data-Driven Decision Making

Software Development: Full Stack Development, Object-Oriented Programming, System Design Fundamentals

Frontend Development: React.js, JavaScript (ES6+), HTML5, CSS3, Responsive Design, UI Development

Backend Development: Node.js, Express.js, RESTful API Development, Authentication & Authorization

Data & Analytics: Python, SQL, Exploratory Data Analysis (EDA), Statistical Analysis, Data Visualization

Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Adaptability, Time Management

Tools & Platforms: Git, GitHub, Postman, Docker, Salesforce Trailhead, Power BI, JIRA, Notion

ACTIVITIES

Open-Source Club (Team Lead)

- Led a web development team in Open-Source Club to deliver 3 open-source projects in a single semester.
- Improving digital outreach and Mentored junior developers by spearheading a GSoc awareness workshop.
- Coordinated task management, project planning, and team communication to ensure timely project delivery.
