kansagaramanan2@gmail.com | Porbandar, Gujarat | LinkedIn: Manan Kansagara | GitHub: Manan Kansagara

Education

VIT Bhopal University,
Bachelors of Technology (B.Tech) in Computer Science
Cumulative GPA: 8.55

June 2022 – June 2026

Skills

Tools: Git, Jenkins, Maven, Linux | **Technologies/Frameworks:** HTML, CSS, Node JS, Express JS, MongoDB |

Programming Languages: C++, JavaScript, SQL

Projects

Healthy Leaf, HTML, CSS, JavaScript

March 2024 – April 2024

- Achieved **85%+** accuracy in detecting 38 plant diseases using a deep learning model trained on a 50,000+ image dataset from Kaggle, ensuring reliable and scalable crop health analysis.
- Developed **CNN-based architectures** using TensorFlow for real-time disease classification, achieving an average processing time of under **2 seconds** per image.
- Developed a web-based dashboard for farmers and researchers, enabling instant disease identification and treatment recommendations, reducing diagnosis time by 70%.
- Enhanced model performance to achieve over **85%** accuracy by applying **advanced image augmentation techniques** (including **rotation**, **zooming**, and **horizontal flipping**) and **transfer learning**, ensuring robust performance with limited or imbalanced training data.

Imovies: Movie Ticket Booking System,

January 2025 – March 2025

React.js, MongoDB, Node.js, Express.js, RestAPI, Postman

- Developed an end-to-end movie booking system using React.js for a responsive frontend and Node.js/Express for a scalable REST API, delivering a seamless user experience.
- Designed and managed a high-performance MongoDB database to handle user profiles, dynamic movie listings, and booking transactions with optimized queries.
- Built a feature-rich admin dashboard for theater management, enabling real-time tracking of user bookings, revenue reports, and seat occupancy, streamlining operations for cinema staff.
- Integrated the **SendGrid API** to trigger personalized email confirmations (tickets, reminders, cancellations), improving user engagement and reducing manual follow-ups by **60%**.

Student Management API with DevOps Pipeline,

March 2025 – April 2025

Spring Boot, Jenkins, Maven, Linux, Docker

- Built a Jenkins-based CI/CD pipeline that reduced deployment time by **70%**, executing **50+** automated builds with integrated JUnit tests achieving **95%** code coverage.
- Dockerized the Spring Boot application, slashing environment setup time from 2 hours to under 5 minutes and enabling seamless experience and cross-platform deployment.
- Leveraged Maven for dependency management, reducing build failures by **40%** through strict version control and automated conflict resolution, improving development efficiency.
- Integrated **Prometheus** and **Grafana** for real-time performance monitoring and automated failure alerts, reducing downtime by **30%** and enabling proactive issue resolution.

Certifications

Fullstack Development (MERN) with MongoDB Developer certification | DevOps - IBM

Extra Curricular Activities

- Led a web development team in **Open-Source Club** to deliver 3 open-source projects in a single semester, improving digital outreach and Mentored junior developers by spearheading a GSoc awareness workshop.
- Achieved a **100,000+** point milestone on **Trailhead**, completing extensive challenges focused on **Salesforce CRM**, administration, and development principles.
- Successfully cleared multiple coding rounds in **Amazon HackOn Season 5**, securing an interview opportunity for an SDE-1 Intern role.
- Selected for India's premier cybersecurity conference, gaining hands-on knowledge of cutting-edge security frameworks(NIST and OWASP) and threat mitigation techniques(Zero Trust Architecture, IDS/IPS, SIEM) while engaging with **200+** industry professionals.
- Orchestrated tech-driven cultural events for the **Gujarati Club** by leading a **10+** member team and leveraging project management tools, to improve productivity.
